

Project: ADA Transition Plan Bus Stop Mapping

Council Priority: Quality of Life

Performance Measure: 3.14 ADA Transition Plan

This project aims to evaluate data collected about bus stops through the ADA Transition Plan. Each bus stop is represented as a single GIS point, but each point may represent multiple features (i.e. benches, bike rack, bus shelter, etc.). This work will document the different features and use GIS to develop a dataset that can be used to track the repairs being completed at each bus stop. The results of this work will provide a more accurate representation of the bus stop repairs identified in the ADA Transition Plan as well a way to track repairs by feature.

Skills, knowledge, abilities best suited for the project: *ArcGIS, Excel, Collaboration, Organizational Skills, Research and Analysis, Time management*
